Executive Summary

When studying for finals, the usual routine is to start reviewing from the first lecture and then going from there. Sometimes it's hard to do so because the resources you used throughout the semester aren't organized well, then you are going back and forth between topics and weeks of lectures. Students will waste countless hours studying just for it to end up not being that effective. We thought a good idea was a website to organize your bookmarks and resources so that it is easier to go back to those resources. Our website, StudentSources, is a website where any resources from students in SFSU can be uploaded in an organized fashion. The ordered list can then be shared with other students on the website. The list can also be titled or indexed by class name, class number, or professor. This way students can easily find resources to study within just a few clicks, and the time they spend studying will be effective and useful.

StudentSources will have a range of features to make studying easier for students. The main key feature of the website will be being able to organize online resources such as links to any useful resources or videos. Users will be able to put resources in any order they want, resulting in a list of related resources. The website will also accept multiple file formats, such as PDFs, PNGs, and links to MP4s (documents, pictures, videos). Another key feature of StudentSources is the ability to share those lists of resources with other students. This will prove to be useful when studying alone, with a group, or when wanting to share your study strategies with someone else. The last key feature StudentSources has to offer is the ability to add notes onto PDFs to add any additional information you want to save.

Our website StudentSources has lots of unique features that other study sites don't have. Sometimes, the resources that students find online might end up using a different method or formula than what the professor teaches. This makes the resource found practically useless, and makes studying feel pointless without the correct study materials. One key feature of StudentSources is its exclusivity, as it's available only to San Francisco State University students. This makes it so resources that relate to topics taught in SFSU but aren't really covered by professors will not be present. The website's structure allows for the organization of student-made resources based on the professor's name, course name, or course abbreviation and number (CSC648 for example), providing an easy and fast way to navigate the website and find what you are looking for. Another feature of StudentSources is dedicated groups and servers for each class, allowing students to share resources and leave comments on shared items, encouraging collaboration and knowledge-sharing. Lastly, our team is planning to

include a chatbot powered by AI technology that can summarize documents, saving students valuable time, instead of reading a document with 100 pages of notes. Overall, StudentSources offers a comprehensive and innovative platform for SFSU students to access and organize their course materials, and even find new course materials from other students.

Main Use Cases

1. Struggling with grades (Aaron, 19, 2nd year in college)

Aaron is from Utah but attends SFSU and lives in the dorms. He wanted to go to SFSU to experience living in SF and to meet new people. He is an avid procrastinator and struggles to study for exams and midterms. Recently, he has been struggling grade-wise, so much so that his parents have threatened to send him back to go to college back home in Utah if he doesn't improve his grades. His main problem is that when finals come around, he keeps playing video games and then studies last minute. He also needs help staying motivated because he gets frustrated quickly and gives up on studying after a while. He saw someone sitting beside him studying and asked them what website they were using. The student said the website was called StudentSources, and that they made a list of study resources on it. After using StudentSources, Aaron has resources posted by students in SFSU for his Computer Science and History classes. Because of the ordered list of resources, he can easily stay on track and focused. He gets good grades on his finals and finishes the semester with A's and B's, which impresses his parents. His parents let him stay at SFSU, and he is happy he found StudentSources and gets to stay in San Francisco.

2. About to graduate (Sydney, 23, 4th-year college)

Sydney is a senior student from Tennessee who attends SFSU and is excited to graduate this spring. She always wanted to experience living in a big city, and SFSU has provided her with that opportunity. However, Sydney has been feeling overwhelmed lately, as she is away from home and has many final projects and assignments due at the end of the semester. She has always been a procrastinator, making completing her work on time challenging. Sydney is worried that she may not graduate with the high GPA she had hoped for. She mentioned her struggles to a friend, who recommended using a website called "StudentSources," which is a website where students can upload resources like slides and notes to share with other students. After using StudentSources, Sydney found valuable resources from fellow students for her classes to help her stay on track with her assignments. She has found that she can complete her work on time, stay motivated, and get better grades. With the help of StudentSources, Sydney is confident that she will graduate with the high GPA she has always wanted.

3. A friend needs help with studying (Darren, 22, 3rd-year college)

Darren is a student at SFSU and is very passionate about his studies. His friend, who attends a different university, has been struggling with their classes lately and has contacted Darren for help. They are both Computer Science majors, so his friend asks him if he has any tips. Darren wants to send his friend a list of study resources to help them improve their grades. He tells his friend he uses a website called "StudentSources," which has a vast collection of resources for various subjects. Darren uses this site to study, so he sends his friend a link to his list of study resources. The resources are well-organized and easily accessible, which makes it easier for his friend to stay focused and motivated while studying. With the help of the resources, Darren's friend can improve their grades and pass their classes. Darren is happy to have been able to help his friend; he and his friend continue to use StudentSources to stay on top of their studies.

4. Helping students (Dave, 42, Professor of Biology)

Dave is a professor of Biology at SFSU. He enjoys teaching his students and wants to ensure they have all the necessary resources to succeed in his class. One day, he hears about a website called StudentSources that allows him to create a list of study resources that his students can access. He makes a list on StudentSources for his class, including helpful slides, textbook pages, and practice exam PDFs. Dave shares this list with his students at the beginning of the semester, and they find it incredibly useful. They appreciate how organized and easy to use the website is and use it to stay on track throughout the semester. Some students also find other valuable notes uploaded by students for their other classes. Thanks to Dave's uploaded list of resources and the help of StudentSources, his students perform well in his class and feel confident in their understanding of the subject matter. Dave is happy to have found such a helpful tool and looks forward to using it for future classes.

5. Help for tutoring (Milena, 32, Tutor)

Milena is a dedicated tutor who wants to help her students succeed. She tutors middle schoolers mainly with subjects related to math. She has noticed that some of her students need help finding the right study resources to help them with their coursework. To make things easier for her students, Milena has created a list of study resources using StudentSources that she can share with them. She understands that each student has a unique learning style and needs, so she has made sure to include a variety of

resources that cater to different types of learners, which is made possible by the StudentSources website. Milena's list comprises online resources, study guides, and practice problems specifically tailored to the subjects her students are studying. Her students are grateful for her help and find the resources helpful in improving their grades. Thanks to Milena's help and StudentSources, her students can achieve academic success and feel more confident in their learning abilities.

6. Technology Troubles (Marc, 20, organized student)

Marc is a scholar student at SFSU who has been acing his class since the first semester. He has been attending classes regularly and making detailed notes of each lecture; moreover, every day at night, he regularly reviews his class notes and researches more on particular topics to gain valuable insights. All this work makes it easy for him to ace the finals since he has to revise his notes. However, two weeks before finals, his laptop fell down the table accidentally and broke along with all of his notes for the current and previous semesters. He went quickly to the service center for repair; however, they said it was impossible to fetch the data. Due to this, he could not study well or perform in the exams. The following semester, he came across StudentSources, which he used to store all his notes. He was happy to organize different links to various videos and articles related to his studies. This helped him stay focused and made him tension free from the laptop crash incident again since he would have a backup of all of his notes.

7. Attending many classes (Zander, 21, college student)

Zander is in a hurry to finish his graduation and has decided to take up all the remaining classes this semester only. He takes six courses for the semester, all of which are study intensive. After two weeks, he realizes he cannot keep up with the assignments and classes because the subjects and content must be clarified. It is easy to focus in class, but when he goes home and tries to study or work on assignments, he finds it hard to manage different notes and content. He comes across StudentSources, where he can create a list and content categorized by various factors like class name, professor, Etc. He finds it very straightforward to work on it and can manage his assignments well and on time. Moreover, over the semester break, he also adds data from his previous semester. Whenever he is stuck on any advanced course, he can quickly check on the content of the related beginner courses and promptly clear his doubts. Hence, using StudentCourses, he handled the workload very effectively.

8. Landing A Job (Donovan, 26, recent graduate, looking for jobs)

Donovan recently graduated from SFSU and is now applying for jobs in various companies. However, due to the recession and the competitive market scenario, there are very few jobs in his desired field. This has made him very anxious since he is also pressured to repay education loan EMIs. While looking for jobs, he finds out that there are many openings for cybersecurity professionals. The problem is that Donovan last learned about cyber security in his bachelor's. Still, the good news is he used StudentCourses throughout his education to make notes and organize lists of the content. Searching through the course name, he found all the letters and content he used to learn cybersecurity. He was able to re-learn very quickly and crack a job interview as a cybersecurity specialist. This made him very happy and relieved as he could repay his education loan.

9. Overwhelming Course Load Candace — (26, overwhelming course load)

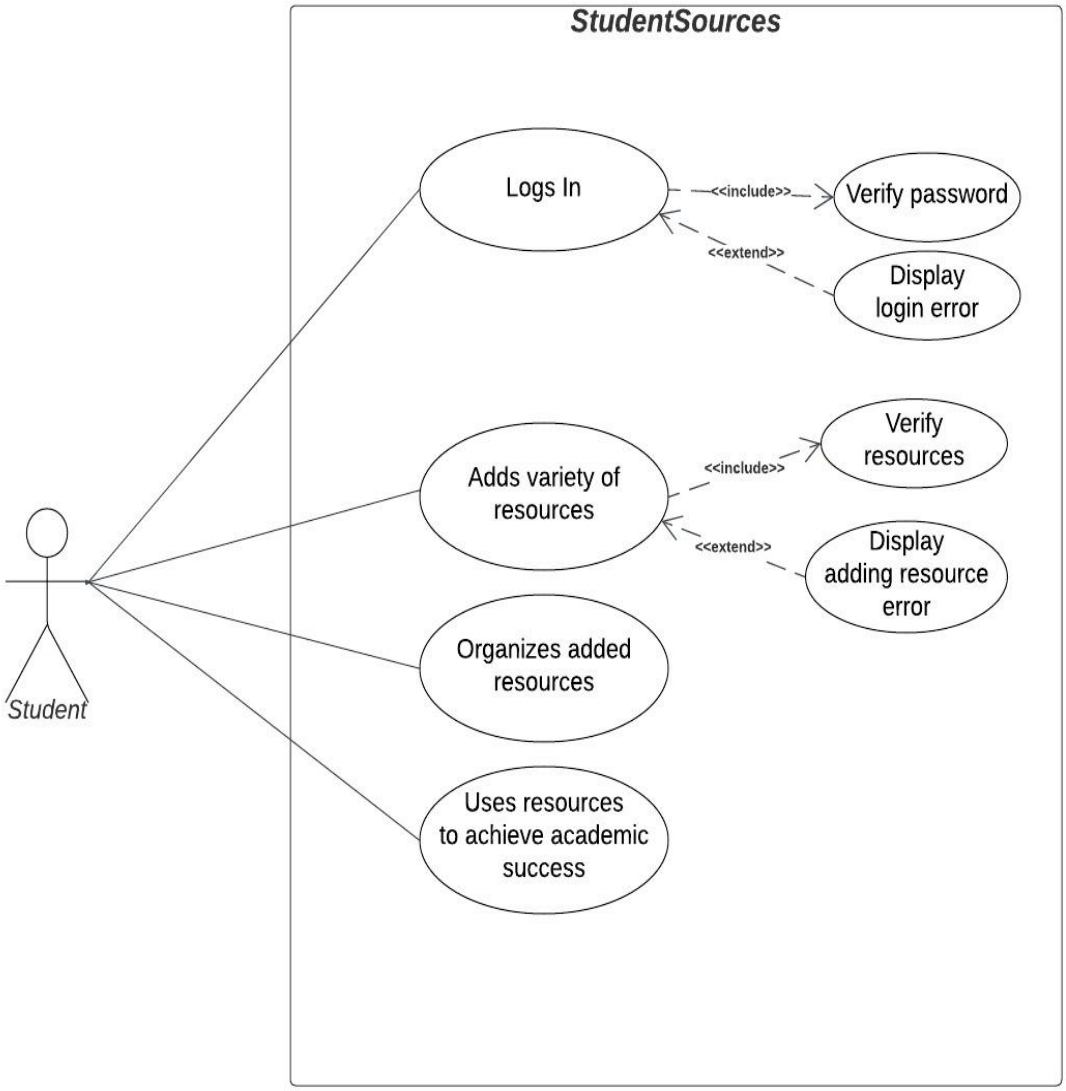

Candace is a Nursing major that has just transferred to SFSU from a community college and realized that the workload at the university level is much higher and finds it overwhelming. The semester begins, and she struggles to keep up with her classes. She considered withdrawing from three of her courses. She then met a classmate taking 24 units, and to her surprise, she "asked how she stays on task with her work?" She responds, "StudentSources, a website that helps organize a list of student resources." Candace began using StudentSources and was able to catch up and ended up getting a 3.7 GPA in her first semester as a transfer.

10. Imposter Syndrome (20, considering dropping out or changing majors)

Jacob is 20 yrs old and is a transfer student from Austin, Texas. He is in his first semester and has difficulty learning and feels that the lectures are going too fast for him. He was not able to record proper notes due to the speed of the professor changing the slides. This resulted in him considering dropping out or changing majors. After speaking with some of his professors, they introduced him to StudentSources, a web page that gives him access to lists of organized resource links for students to improve performance. He tries it, and his confidence in passing the class goes up. Jacob does not need to worry about writing everything down because, with the help of StudentSources, he has learned so much more. Jacob decides to continue with his chosen field and is happy with where he is now.

Main Use Cases Diagram

A student organizes his online resources on StudentSources for their academic success.

A student shares his online resources on StudentSources to other students.

Main Data Items & Entities

1. **General User -** A general user can not view *approved resources*. General users do not need to log in/register.

2. **Registered User -** Registered users are attached to an *account*. A registered user can view *approved resources*. A registered user can upload *resources*. A registered user can open their files on a separate *tab*. A registered user must be logged in and registered.

3. **Account -** An account belongs to a *registered user*. An account stores user-related data such as username, real name, and posted resources.

4. **Admin -** An admin can access all data and content and modify the database. Needs to login/register

5. **Unapproved Resource -** A resource is a specified data grouping that contains useful information for students. Resources can only be viewed by an *admin*.

6. **Approved Resource -** An approved resource is a *resource* that has been approved by an *admin*. Approved resources can be viewed by *admins* and *registered users*.

7. **Tab** - A tab in the website shall be opened for files/ *lists* clicked on by a *registered user.*

8. **List** - A list is an ordered group of *approved resources* that can only be viewed by *registered users*.

Functional Requirements

1. General User

1.1. A general user shall be able to create one or more accounts.
1.2. A general user shall be able to sign up with a unique email address.
1.3. A general user shall be able to sign up with a non-unique password.
1.4. A general user shall be able to see an indication of password strength.
1.5. A general user shall be able to sign up with a non-unique username.
1.6. A general user shall be able to read the terms and conditions.
1.7. A general user shall be able to agree to the terms and conditions.
1.8. A general user shall be able to resend an account verification email.
1.9. A general user shall be provided a user manual covering basic features.

2. Registered User

2.1. A registered user shall have at least one account.
2.2. A registered user shall be able to interact with a skippable tutorial sequence.
2.3. A registered user shall be able to view their account information.
2.4. A registered user shall be able to temporarily unhide account password information.
2.5. A registered user shall be able to temporarily unhide account email information.
2.6. A registered user shall be able to change their account username.
2.7. A registered user shall be able to change their account email.
2.8. A registered user shall be able to change their account password.
2.9. A registered user shall be able to upload any file type to their account's cloud storage.
2.10. A registered user shall be able to cancel an upload that is in progress.
2.11. A registered user shall be able to navigate through files with a directory tree.
2.12. A registered user shall be able to organize files through a directory tree.
2.13. A registered user shall be able to view the current directory from a main viewing panel.
2.14. A registered user shall be able to create directories.
2.15. A registered user shall be able to create text files.
2.16. A registered user shall be able to create bookmarks of web URLs.
2.17. A registered user can open their files on a separate tab.
2.18. A registered user can open their saved web pages on a separate tab.
2.19. A registered user shall be able to view pdf files on the website.

2.20. A registered user shall be able to change the color theme of the website.
2.21. A registered user shall have a place to type and save notes.
2.22. A registered user may have an assistant AI chatbot.
2.23. A registered user shall be able to highlight text on pdf files.
2.24. A registered user shall be able to comment on pdf files.
2.25. A registered user shall be able to step backward into previous views.
2.26. A registered user shall be able to undo a move operation.
2.27. A registered user shall be able to move items to a trash bin.
2.28. A registered user shall be able to delete items from a trash bin permanently.
2.29. A registered user shall be able to recover items from a trash bin.
2.30. A registered user shall be able to download files onto their computer.
2.31. Registered users shall be able to share their directories/folders.
2.32. A registered user shall be able to configure permissions of their shared directories/folders.
2.33. A registered user shall be able to view other shared directories/folders.
2.34. A registered user shall be able to download other shared directories/folders onto their account.
2.35. A registered user shall be able to download other shared directories/folders onto their computer.
2.36. A registered user shall be able to search public directories/folders.

3. Account

3.1. Account shall have a certain amount of cloud storage.
3.2. Accounts should require and store a username that is at least 6 characters.
3.3. Accounts should require and store a real name tied to them, and the real name must have a first and last name.
3.4. Accounts should require and store a password tied to them.
3.5. Accounts password shall be encrypted when stored in a database.

4. Admin

4.1. Admin should be able to access all resources, approved or not
4.2. Admin should be able to delete any resources present on the website
4.3. Admin should be able to change resource to an approved resource
4.4. Admin should be able to change approved resources to regular resources.
4.5. Admin should be able to delete/ban any user for any reason (breaking of rules/TOS, inappropriate username)
4.6. Admin should be able to delete any inappropriate resources uploaded
4.7. Admin should be able to

5. Unapproved Resource

5.1. An unapproved resource shall only be viewed by an admin.
5.2. An unapproved resource shall not be viewable by users until approved.
5.3. An unapproved resource shall be able to be converted to an approved resource
5.4. Unapproved resources shall not be able to be shared until an admin approves it.

6. Approved Resource

6.1. Approved resources shall be able to be viewed by admins and registered users
6.2. Approved resources should be able to be converted back to unapproved resources.
6.3. Approved resources shall be able to be shared via a generated link.
6.4. Approved resources

7. Tab

7.1. Tabs should be able to be closed by a registered user.
7.2. A tab should be opened once a user clicks on a list they want to look at.

8. List

8.1. A list shall be able to be shared via a generated link.
8.2. A list will have a unique link, the link is assigned only to that specific list.
8.3. A list's unique link will comprise randomly generated letters and numbers.
8.4. A list’s generated link shall only be able to be viewed by registered users.
8.5. A list should be able to be ordered by the registered user that creates it.
8.6. List's order should be able to be edited at any time by the registered user that created it.

Non-Functional Requirements

1. System Requirements

1.1. System shall send out an account verification email to a general user upon sign-up.
1.2. System shall send out an error message to general users upon a failed verification attempt.
1.3. System shall send out a success message to newly registered users upon a successful verification attempt.
1.4. System shall redirect newly registered users to the homepage upon account verification.
1.5. System shall always hide registered users account email information on startup.
1.6. System shall always hide registered users account password information on startup.
1.7. System shall send out a new account verification email to a registered user upon changing account email.
1.8. System shall show a registered user a progress and estimated wait time upon uploading files.
1.9. System shall periodically delete files from a trash bin.
1.10. System shall provide to registered users the amount of free storage remaining.
1.11. System shall display an error message when a registered user exceeds the cloud storage limit for their account.

2. Performance

2.1. Any response to StudentSources links should be within 2 seconds.
2.2. Any response to any StudentSources links should be within 4 seconds during high volume
2.3. Should be able to load large file sizes within 3 seconds
2.4. Should be able to load large file sizes within 5 seconds during high volume
2.5. Log-in and logout of websites should be almost instant.
2.6. Buttons, textboxes, and options on the landing UI should be responsive
2.7. Buttons, textboxes, and options on upload content UI should be responsive
2.8. StudentSources must be able to handle a large amount of simultaneously active users

3. Storage

3.1. StudentSources should be able to handle files with a large size.
3.2. The database should properly store files in DOC format.
3.3. The database should properly store files in DOCX format.
3.4. The database should properly store files in HTML format.
3.5. The database should properly store files in PDF format.
3.6. The database should properly store files in PPT format.
3.7. The database should properly store files in JPEG format.
3.8. The database should properly store files in PNG format.
3.9. The database should be able to handle different file formats while still being efficient.

4. Security

4.1. Students must have a registered account to have access to all StudentSources files.
4.2. Passwords should be encrypted in the database.
4.3. Passwords created will not be known by any admins, as they will be encrypted.
4.4. Website will use secure hosting (AWS).
4.5. Website will ensure only authorized users can access resources.
4.6. Website will ensure only admins can access sensitive information

5. Environmental

5.1. Website will be optimized for energy efficiency, optimizing images, using efficient code, and minimal use of plugins.
5.2. StudentSources will encourage students to use electronic files instead of printing and using materials to reduce paper waste and the environmental impact of printing.
5.3. StudentSources will encourage responsible use, for students to upload and download files only when necessary to reduce storage and bandwidth of website.
5.4. StudentSources will encourage students to also delete any files they no longer need to reduce storage and bandwidth.

6. Marketing

6.1. StudentSources should be marketed primarily to CS majors in SFSU.
6.2. Website will be marketed as a better way for students to store study resources.
6.3. Website will be marketed as a way to reduce paper waste.

7. Legal

7.1. StudentSources will comply with copyright laws, to ensure that when the website stores files without infringing the copyrights of others.

7.2. StudentSources must obtain permission to use copyrighted material according to fair use and copyright laws.

7.3. StudentSources will have a privacy policy explaining how personal data is collected, used, and protected, which is important for things like student information.

7.4. StudentSources will have security measures to prevent unauthorized access of data stored in the website's database.

7.5. StudentSources will have terms and conditions that govern the use of the website by SFSU students.

7.6. Terms and Conditions will explain rules about uploading and downloading files and acceptable use of the site.

7.7. StudentSources will be accessible to students with any disabilities in accordance with applicable laws in California.

8. Content

8.1. Content present on the website will be mostly if not all related to college courses in SFSU.

9. Look and Feel

9.1. StudentSources's landing page UI should be simple for users to understand.

9.2. Website should feel like you can find resources easily, not having to browse for more than 5 minutes.

9.3. StudentSources UI should use colors that do not distract from the content of the website

9.4. StudentSources UI for uploading content should be easy to understand and navigate

9.5. Website should look sleek and not too crowded.

10. Usability

10.1. The website should have no issues running when experiencing high volume.

10.2. Website shall be usable for people with reading disabilities.

11. Privacy

11.1. StudentSources will only collect data that is necessary for the website's purpose.
11.2. Passwords will be encrypted to ensure data security.
11.3. Website will establish policy for data retention, how long student data will be kept and when it will be deleted.

12. Compatibility

12.1. The website should be accessible using branded computers such as Windows, Apple, Asus, etc.
12.2. Website should be accessible on a range of devices like desktop computers, laptops, tablets, smartphones.
12.3. Website should be compatible with operating systems such as Windows and macOS.
12.4. Website should be compatible with a wide range of web browsers, including but not limited to: Chrome, Firefox, Edge, Safari
12.5. Website supports uploading of a range of file formats, like DOCX, JPG, PDF, etc.

13. Organizational

13.1. StudentSources will have a user-centered design, focused on ensuring the website is easy to use and navigate for students.'
13.2. Titles of lists of resources that approved users create will be organized depending on what user has clicked (Course Name page, Professors page).
13.3. Website will have a clear purpose for students and stakeholders and not be too broad.

14. Coding Standards

14.1. The source code should be clear.
14.2. Source code should be concise.
14.3. Source code should be consistent.
14.4. Source code should be well commented.
14.5. Source code file names should be clear.
14.6. Source code file names should be concise.
14.7. Source code file names should be consistent.
14.8. The file structure should be easy to navigate.

Competitive Analysis

Important features of competitive products

Company Features	Padlet	Wakelet	Bublup	LiveBinders	Dropbox
Strengths	Customizable and collaborative.	Intuitive UI placement. Offers features for students of all levels	Lots of functionality	Good for sharing docs in a binder format.	Very fast upload and syncing.
Weaknesses	Unfamiliar user interface and limited cloud storage. Too costly for students.	Limited features.	Some features do not work as expected. Offers low storage.	Difficult for the average user. Storage is limited for all levels/tiers	Lacks themes, customization, and easy sharing.
Pricing	Free tier, $6.99/ month tier, and $9.99/ month tier.	Free tier, then requires a quote for upgrading.	Free tier, $6.99/ month tier, $9.99/ month tier, and $24.99/ month tier	Free tier, and $19.95/ month paid tier.	Provides freemium service with several plans. $9.99/ month - $24/ month plans
Social Media	Instagram.	Facebook, LinkedIn, Twitter, Instagram	Facebook, Pinterest, Instagram, YouTube, Reddit, TikTok.	Blogs, podcasts, YouTube, Twitter, Facebook, LinkedIn, and Instagram.	Twitter, Facebook, and YouTube.
Experience	Moderate learning curve with unfamiliar UI.	Easy to navigate, set up, and organize resources.	Provides plenty of instructions throughout the setup process.	Features are confusing to use.	Provides plenty of support and features in an intuitive manner.

Competitive Analysis Summary

After conducting our competitive analysis, we can see that the market for storage of general resources is out there but is usually limited and locked behind an expensive paywall, which for a college student is not optimal. With more essential expenses to worry about, such as housing, tuition, and textbooks, students like us will look for more cost-friendly options. Since our target audience is mainly college students who attend San Francisco State University, our website is superior due to the website being geared towards students of SFSU. Competitors such as DropBox or LiveBinders have cloud storage for files but are mostly used for general file storage. In StudentSources, only files related to college and specific classes will be present. This results in students being able to easily find and access valuable resources from students who have taken or are taking courses at SFSU. Based on data compiled from other study websites, we have concluded that the website we plan to create, StudentSources, is a better alternative for SFSU students based on convenience, UX/UI, and low pricing.

High-level System Architecture and Technologies Used

Server Host: Amazon EC2 Dedicated Host, t2.micro 1vCPU 1 GB RAM
Operating System: Ubuntu 22.04 Server
Database: MySQL 8.0.28
Web Server: NGINX 1.18.0
Server-Side Language: Javascript and Java
Additional Technologies:

- Web Framework: React and Spring Boot
- Web Wireframe: Figma
- IDE: VSCode and IntelliJ
- Web Analytics: Amazon Kinesis Data Analytics
- Runtime Environment: Node.js and Java Runtime Environment
